NATIONAL ENVIRONMENT RESEARCH COUNCIL

# What is UKCA?

UKCA is an atmospheric composition model, currently built as part of the Met Office's Unified Model (UM).

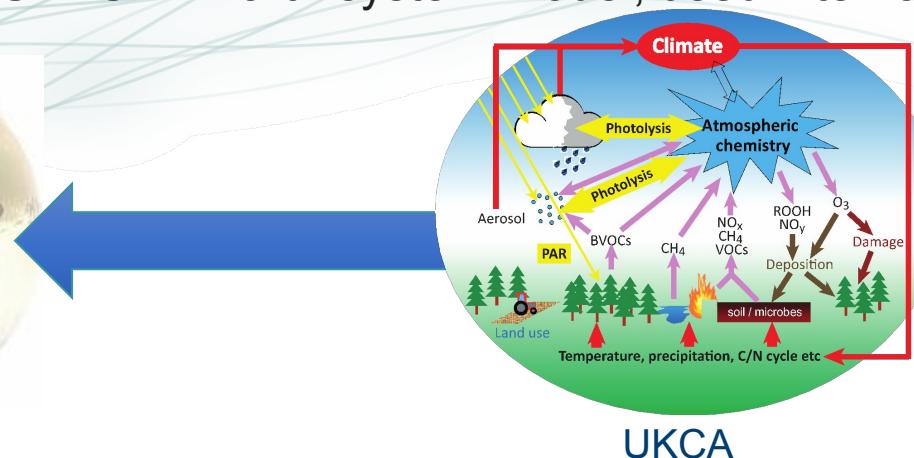

UKCA is not a *particular* collection of chemistry and aerosol schemes, but is a **framework** for putting chemistry and aerosol schemes into the UM.

It was originally designed for long climate simulations, but is now also used for air quality forecasts.

It is part of the UKESM1 Earth system model, used internationally.

Unified Model

UKCA

Atmospheric Science  
NATIONAL ENVIRONMENT RESEARCH COUNCIL

# UKCA Training

Training courses covering the use of UKCA have been run since 2013, and have been supported by NERC and NCAS.

Training is available at UM versions 8.2, 8.4, 10.4, 10.9, & 11.8 on the UKCA website, [www.ukca.ac.uk](http://www.ukca.ac.uk)

Students are asked to solve one big task, broken down into a series of separate tutorials:

*Create two new species, ALICE and BOB, then add in emissions of ALICE and the reaction*

*before adding in the dry deposition of ALICE and the wet deposition of BOB. You should also output the fluxes through the reaction and deposition processes.*

*Later you will look at several aerosol diagnostics.*

National Centre for  
Atmospheric Science  
NATIONAL ENVIRONMENT RESEARCH COUNCIL

# UKCA Training

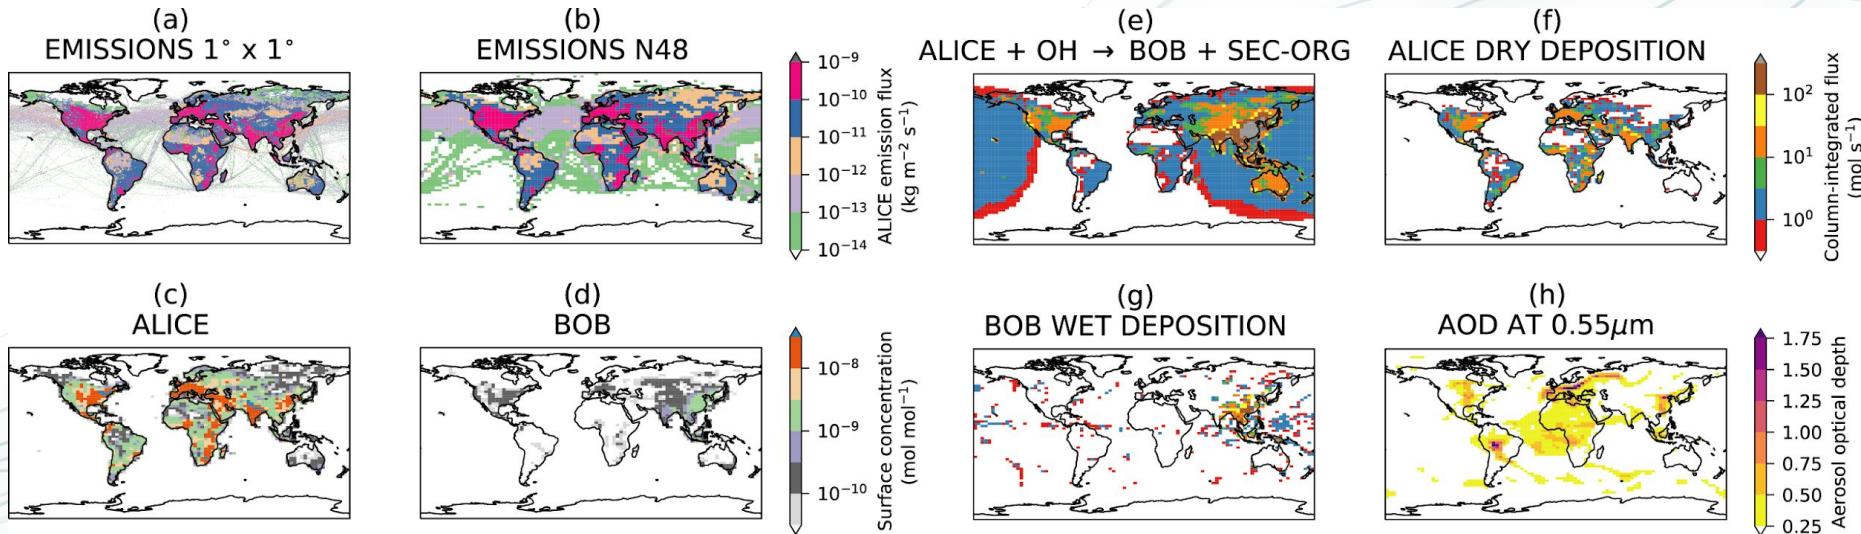

These tasks cover most of what new users might want to do with UKCA:

- Adding new chemical species
- Adding new emissions
- Adding new chemical reactions & deposition
- Defining new model output
- Regridding input data
- Creating NetCDF input files
- Processing & viewing model output

# UKCA Training

- Face-to-face training has been held in Cambridge every January, supported by NCAS
- These courses made use of the PUMA service and ARCHER HPC to run the model
- Over 120 people have attended in-person training events, from 27 institutions from around the world

The vn10.9 & vn11.8 tutorials have also been developed for use on the Met Office Virtual Machine

National Centre for  
Atmospheric Science  
NATIONAL ENVIRONMENT RESEARCH COUNCIL

# UKCA Training using PUMA/ARCHER

As the UM is installed on ARCHER (& now ARCHER2), superficially this seems like a good system to use for UKCA Training.

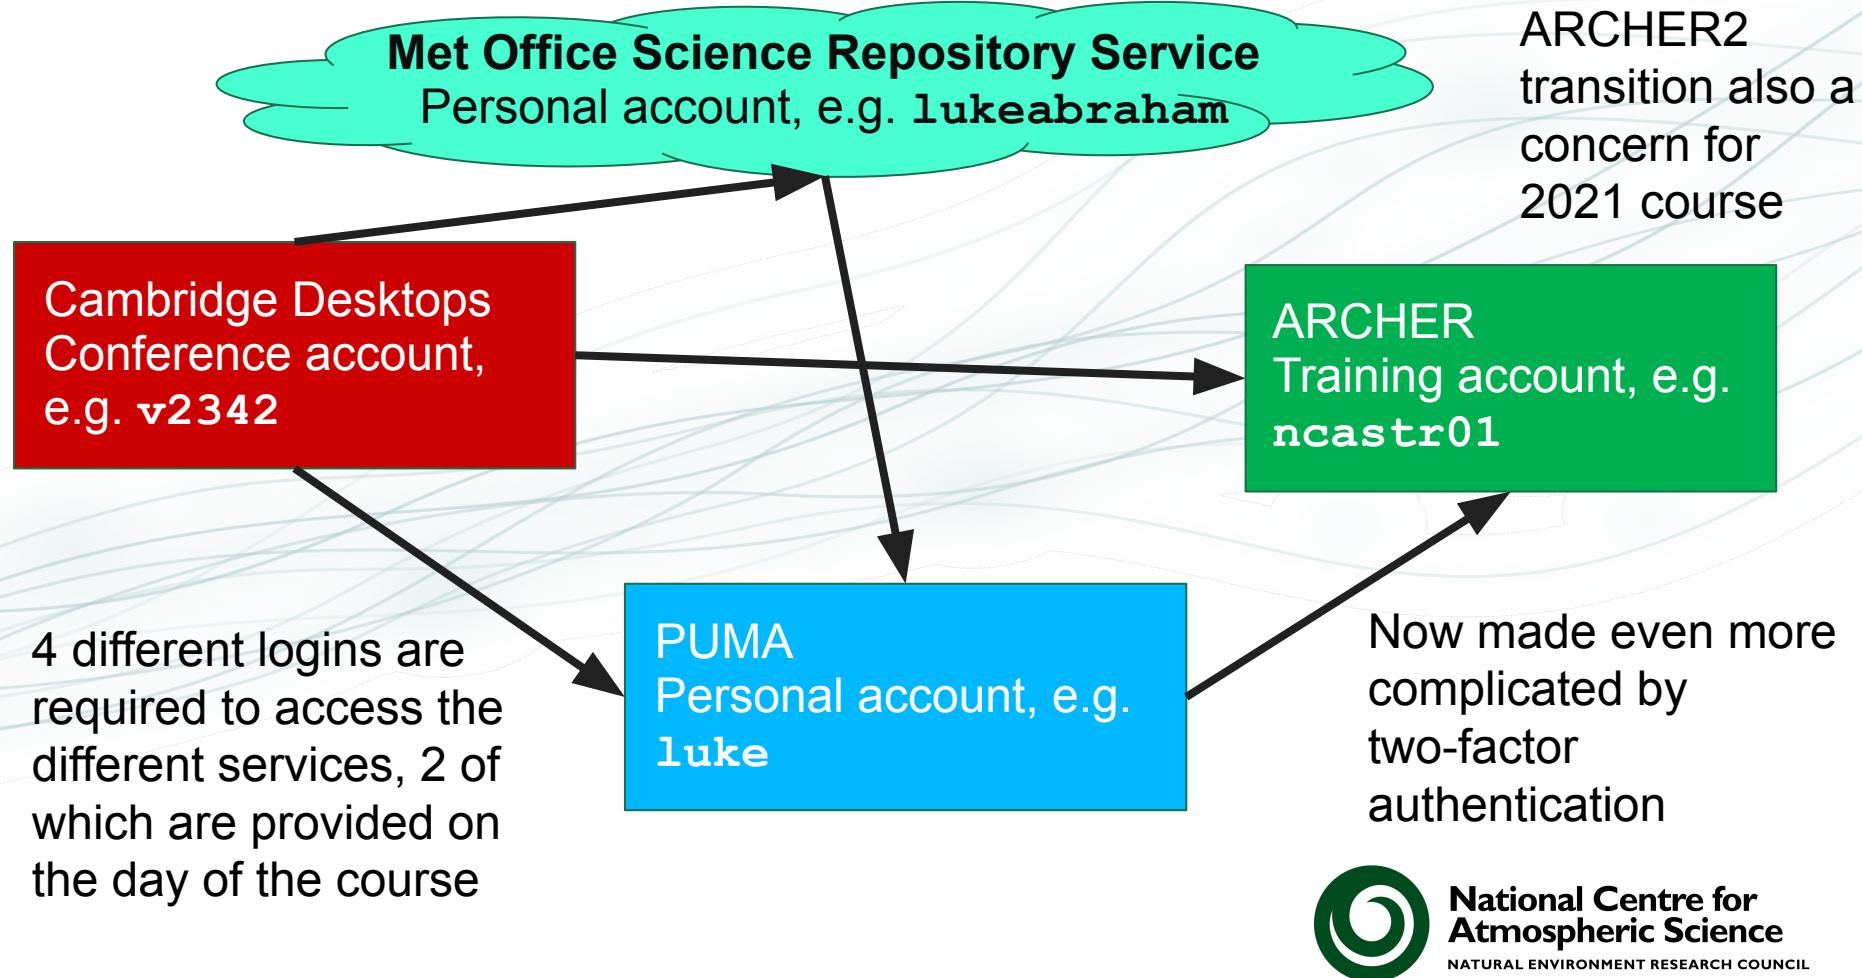

- No technical set-up work is required for the UM
- Students can familiarise themselves with using the HPC and in using UM suites similar to what they would use in their research

However...

- Compile times on ARCHER were long due to the use of shared nodes, meaning that a “manual compile” option had to be implemented
- Several accounts and servers are used, leading to numerous setup issues and confusion
- Often the difficulties encountered by students were to do with connecting to or using ARCHER, not UKCA

# Workflow

# Met Office Virtual Machine

- A Met Office Virtual Machine has been developed for running FCM, Rose, & Cyc
- Uses VirtualBox and Vagrant
- UM Systems Team have set-up running the UM in an Ubuntu guest image.

Virtual Machine on GitHub:

<https://github.com/metomi/metomi-vms>

See UM Documentation Paper X10 for more information on using this system with the UM, and Abraham *et al.* (2018) for its use with UKCA training.

Has also been run on Azure cloud.

Climate  
resolution

VM-suitable  
resolution

By lowering the resolution and model top, turning off some diagnostic sections, and reducing output, it is possible to run a UKCA configuration on a VM with 2x CPUs with 6GB of RAM

National Centre for  
Atmospheric Science  
NATIONAL ENVIRONMENT RESEARCH COUNCIL

# Setting-up Training VMs on JASMIN

While the VM can be run on a PC or in the Cloud, there are a number of technical limitations that need to be overcome.

The current VM uses Vagrant & VirtualBox to configure the VM, with a lot of manual set-up to install the UM and required input files once the VM has been provisioned.

Richard Smith at CEDA ported this set-up for a single VM into Ansible so that it could be run on the UMC. I then extended this set-up further to

1. Pre-install the UM, provide the required input files, and configure the Iris Python package as required for some of the tasks
2. Adapt the Ansible scripts to enable multiple VMs to be provisioned at once, and also to create login and NFS servers

# Setting-up Training VMs on JASMIN

Required 21 j4.small (2 CPUs, 8 GB RAM) VMs and 1 data volume:

25GB volume for UM install

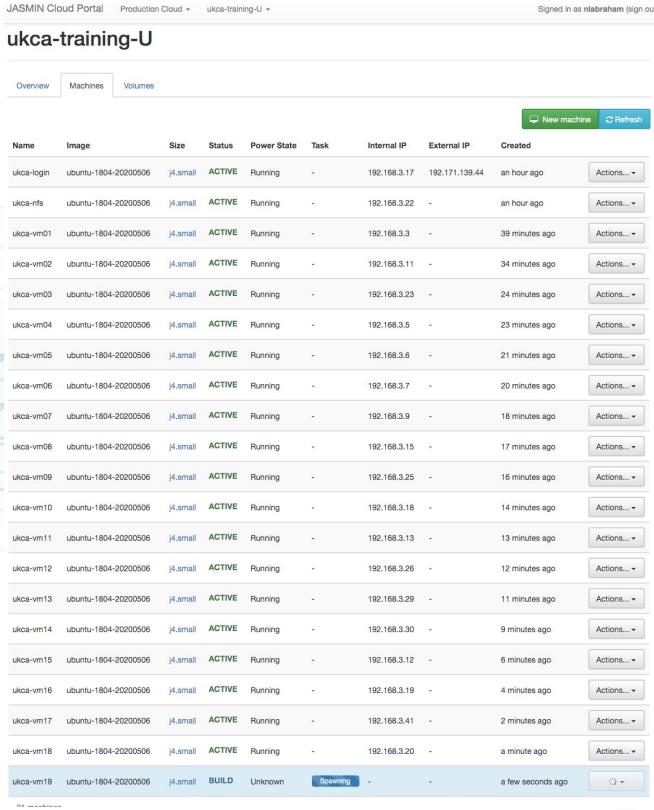

1x NFS server

1x login server

19x VMs (14 for students, 5 for demonstrators)

= 42 CPUs & 172GB of RAM

Once UM has been installed on the data volume, the VMs can be spun-up and spun-down as required in an hour or so.

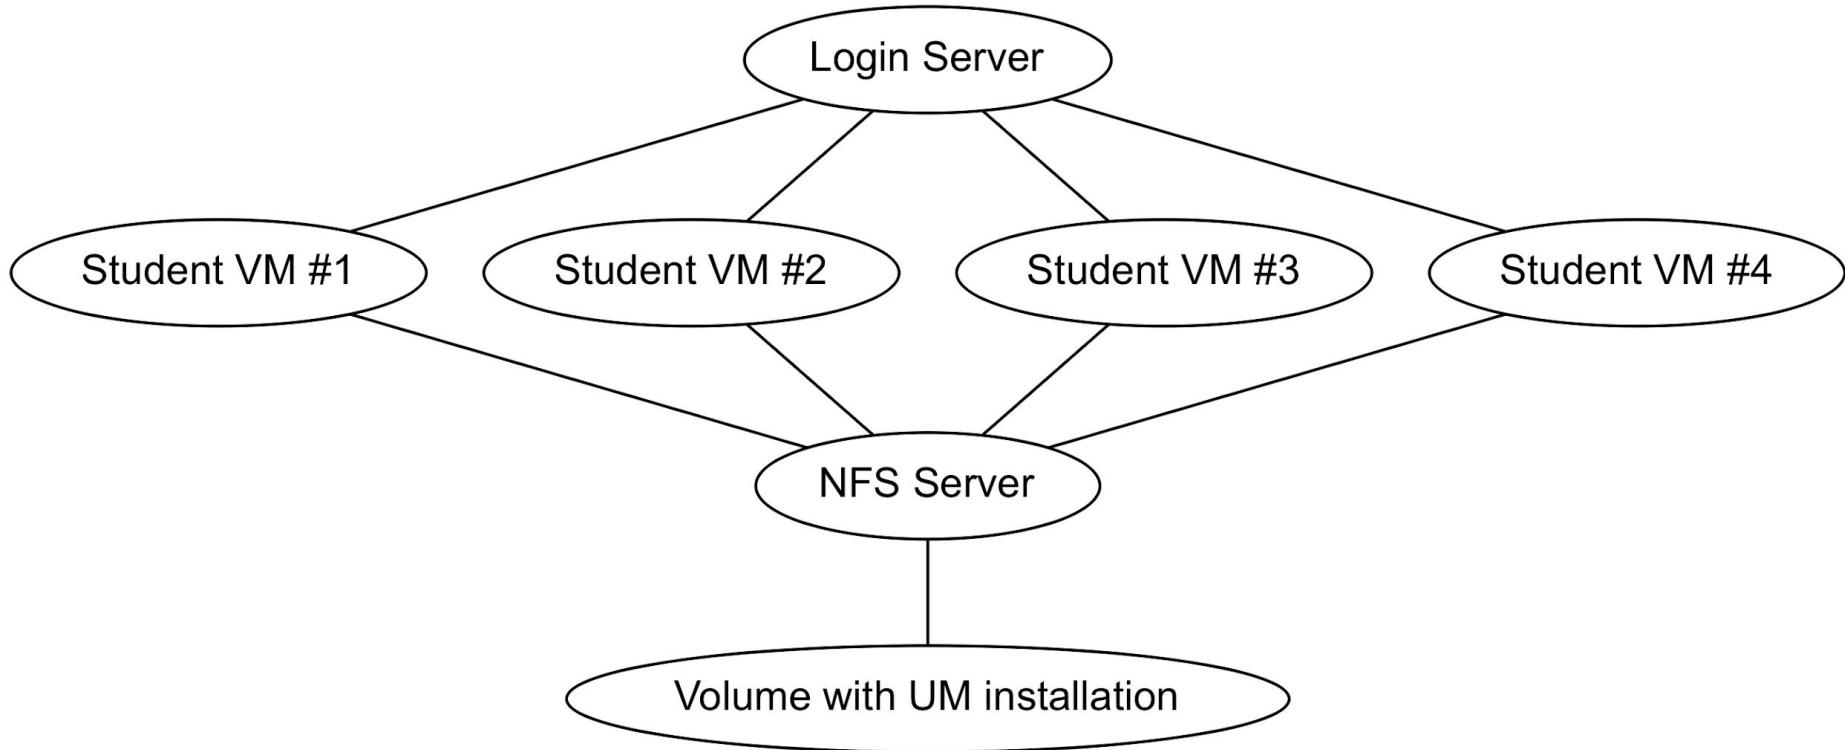

The screenshot shows the JASMIN Cloud Portal interface. At the top, it displays "JASMIN Cloud Portal", "Production Cloud", and "ukca-training-U". It also shows that the user is "Signed in as nlabraham (sign out)". Below this, the title "ukca-training-U" is displayed. There are three tabs: "Overview", "Machines" (which is selected), and "Volumes". A "New machine" button and a "Refresh" button are located at the top right of the main content area. The main content area contains a table with 19 rows, each representing a VM. The columns are: Name, Image, Size, Status, Power State, Task, Internal IP, External IP, and Created. The "Name" column lists names starting from "ukca-login" and ending with "ukca-vm19". The "Image" column shows "ubuntu-1804-20200506" for most machines, while "ukca-vm19" is listed as "BUILD Unknown". The "Size" column shows "j4.small" for all machines. The "Status" column shows "ACTIVE" for most machines, while "ukca-vm19" is in "BUILD" status. The "Power State" column shows "Running" for most machines, while "ukca-vm19" is in "Unknown" state. The "Task" column shows "-" for all machines. The "Internal IP" column shows IP addresses like "192.168.3.17" and "192.168.3.20". The "External IP" column shows IP addresses like "192.171.139.44" and "-". The "Created" column shows times ranging from "an hour ago" to "a few seconds ago". Each row has an "Actions..." button on the far right.

Name	Image	Size	Status	Power State	Task	Internal IP	External IP	Created
ukca-login	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.17	192.171.139.44	an hour ago
ukca-vnfs	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.22	-	an hour ago
ukca-vm01	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.3	-	39 minutes ago
ukca-vm02	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.11	-	34 minutes ago
ukca-vm03	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.23	-	24 minutes ago
ukca-vm04	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.5	-	23 minutes ago
ukca-vm05	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.6	-	21 minutes ago
ukca-vm06	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.7	-	20 minutes ago
ukca-vm07	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.9	-	18 minutes ago
ukca-vm08	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.15	-	17 minutes ago
ukca-vm09	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.25	-	16 minutes ago
ukca-vm10	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.18	-	14 minutes ago
ukca-vm11	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.13	-	13 minutes ago
ukca-vm12	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.26	-	12 minutes ago
ukca-vm13	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.29	-	11 minutes ago
ukca-vm14	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.30	-	9 minutes ago
ukca-vm15	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.12	-	6 minutes ago
ukca-vm16	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.19	-	4 minutes ago
ukca-vm17	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.41	-	2 minutes ago
ukca-vm18	ubuntu-1804-20200506	j4.small	ACTIVE	Running	-	192.168.3.20	-	a minute ago
ukca-vm19	ubuntu-1804-20200506	j4.small	BUILD	Unknown	Spawning	-	-	a few seconds ago

Once the course finished, the VMs were shut down and the resources released back to the UMC.

# Setting-up Training VMs on JASMIN

Ansible playbooks for this system are available via GitHub:  
<https://github.com/theabro/ukca-playbook>

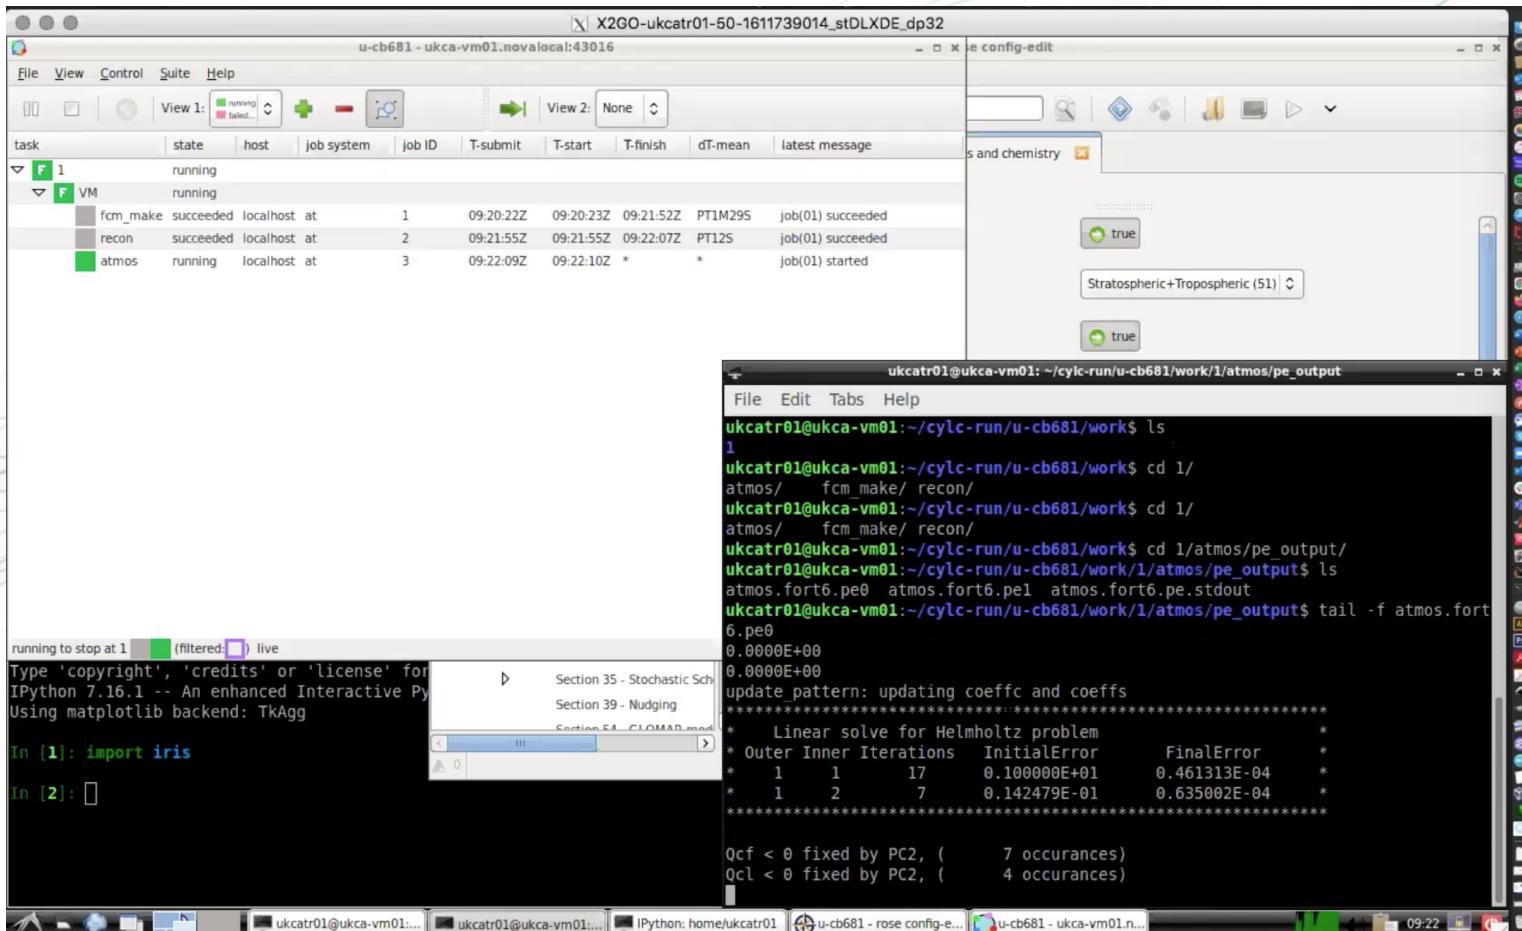

National Centre for  
Atmospheric Science  
NATIONAL ENVIRONMENT RESEARCH COUNCIL

# Setting-up Training VMs on JASMIN

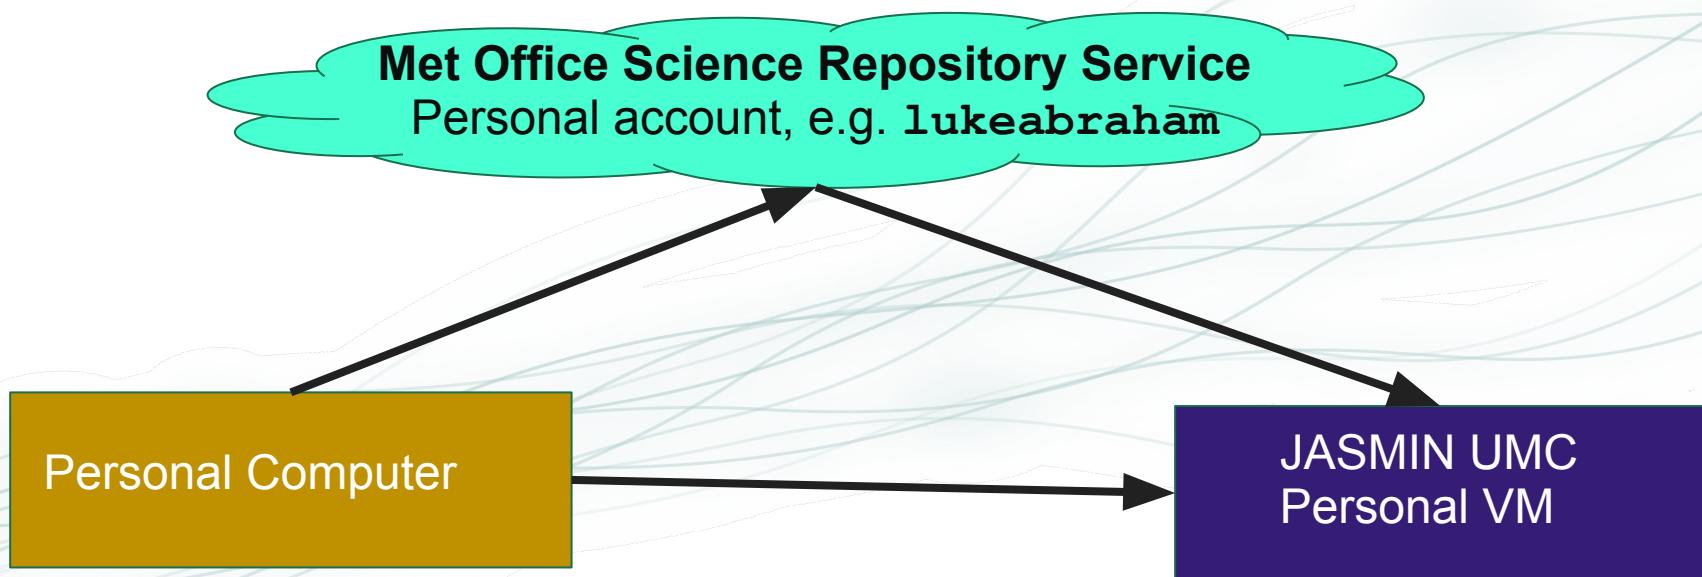

<https://www.youtube.com/watch?v=5V3RBCYTQvg>

Students could connect to the VMs using a number of methods - e.g. X2Go, MobaXTerm, or Terminal/X11

Set-up video with demonstration available on the UKCA YouTube channel.

# New! Workflow on JASMIN

Now, the only username/password that needs to be remembered is for MOSRS.

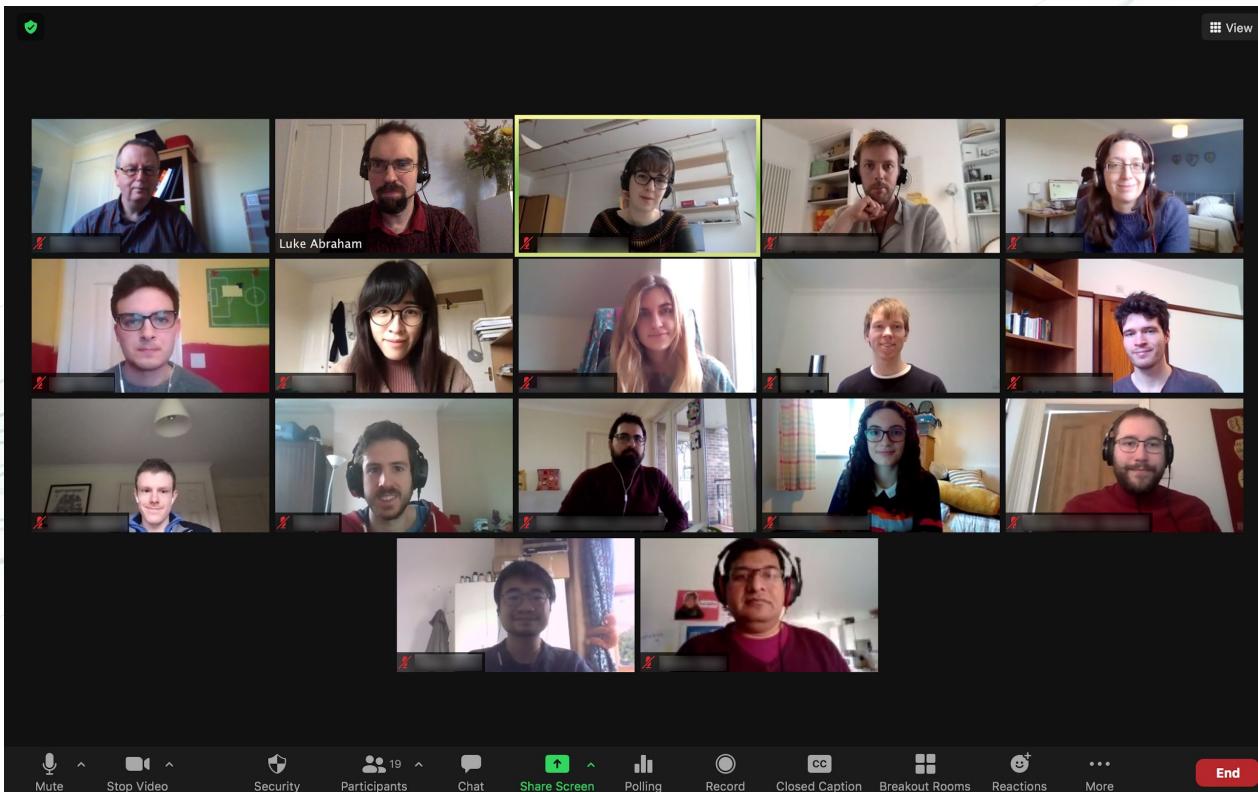

The VMs use SSH keys that are provided to the students.

# UKCA Training in 2021

Due to the pandemic, UKCA training was delivered online in February 2021.

There were 14 participants, with 5 demonstrators (3/4 at any one time).

Course was delivered in a mixture of self-guided time, Zoom sessions, & support via Slack

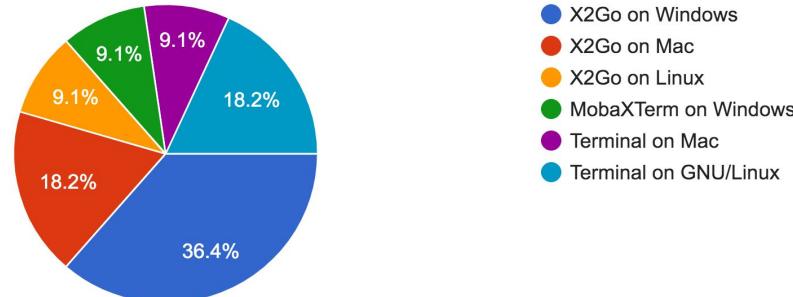

National Centre for Atmospheric Science  
NATIONAL ENVIRONMENT RESEARCH COUNCIL

# Feedback

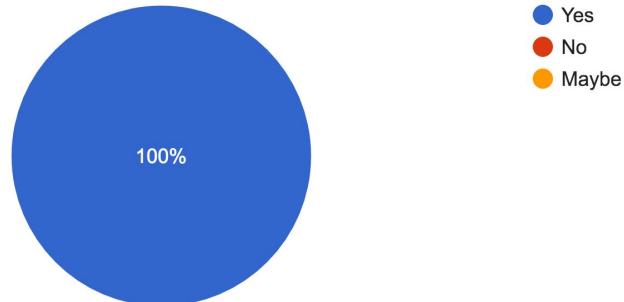

How did you connect to your Virtual Machine?

11 responses

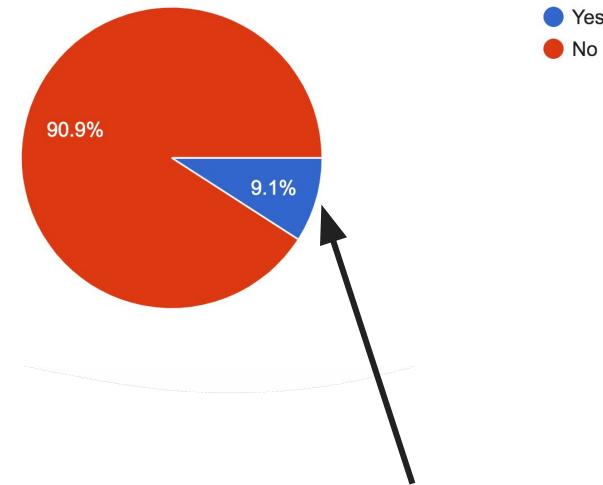

Did you find the Virtual Machine easy to use?

11 responses

Did you have any problems using your Virtual Machine?

11 responses

Problems with cutting/pasting  
text between VM and host

National Centre for  
Atmospheric Science

NATIONAL ENVIRONMENT RESEARCH COUNCIL

# Conclusions

- The JASMIN Unmanaged Cloud is an excellent platform to run online training events
- Effort is required to configure the VMs as required for the needs of the course
- Once done, the experience for the students is far better than when using a service such as ARCHER
- The use of Ansible playbooks means that the environment used can be easily saved and repeated as needed for future courses
